

SNAP IN. LOCK TIGHT. WORK SMART.

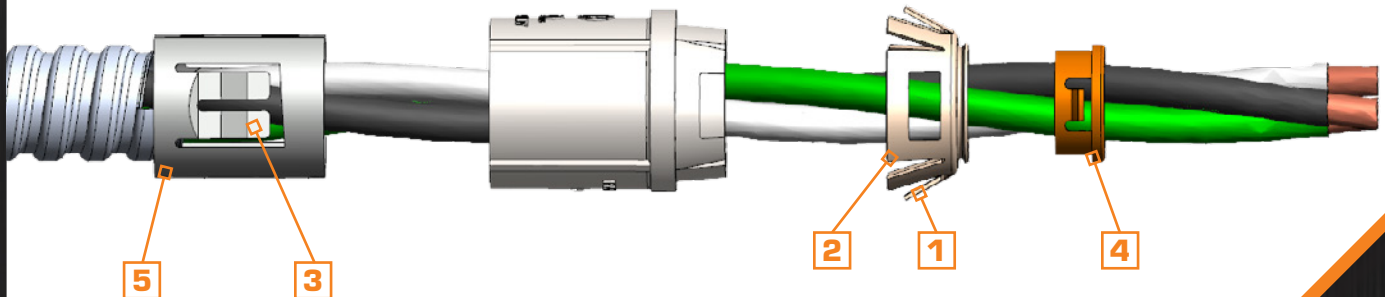

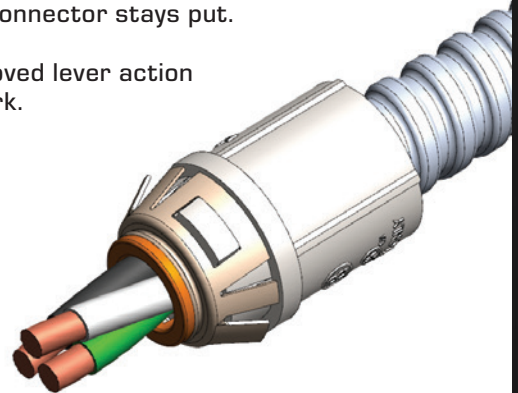

38ASP E-Z LOCK® CONNECTOR - NEW & IMPROVED

The **38ASP E-Z Lock® Connector** is built for electricians who want faster installs without sacrificing a solid, code-compliant connection. With a newly refined snap-in design and inner lock ring, the updated 38ASP installs smoother, holds tighter, and makes adjustments easier when the job changes.

WHAT'S BETTER NOW

Targeted improvements that make a big difference on the job.

- 1. Stronger snap-in engagement**
Improved spring design locks securely into the knockout so the connector stays put.
- 2. Smoother installation, easier removal when needed**
Refined shape guides the fitting into place with less effort. Improved lever action allows cleaner, more controlled removal during changes or rework.
- 3. E-Z Edge™ Technology**
Protects conductor jacket from scoring during wire pull.
- 4. Insulated throat for wire protection**
Helps protect conductors as cables pass through the fitting.
- 5. Reliable electrical continuity**
Designed to stay tight once installed—no loosening, no callbacks.

SNAP IN. LOCK TIGHT. WORK SMART.

WHY ELECTRICIANS USE E-Z LOCK®

Because time matters—and so does doing it right.

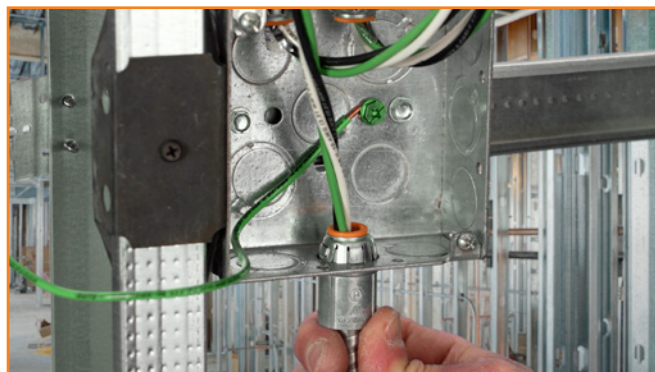

- No locknuts. No threading. No wasted motion.
- Fast, reliable installation.
- Ideal for prefab, lighting whips, and repetitive work.
- Reusable for adjustments and rework.
